MODULARIS CRIMINAL INVESTIGATION SYSTEM (MCIS)

Accelerating Public Safety

1 CRIMINAL INVESTIGATOR FOCUSED

● The Modularis Criminal Investigation System (MCIS) creates a level setting and culture for law enforcement personnel. Commonly investigators have used a mix of paper worksheets and electronic data entry and retrieval systems. Now they have everything they need in one place to:

- Initiate the investigation.
- Record complete and correct investigative narratives.
- Secure people, aliases, locations, businesses, vehicles, and other case-relevant information from electronic data sources quickly.
- Ensure security and confidentiality of information, evidence, witnesses, and suspects.
- Upload and manage multimedia evidence, enhancing value and productivity.
- Manage evidence chain of custody “check in and check out” with full support for Barcode and RFID tagging.
- Complete their case files and pass along to supervisors and other personnel for review, approval and dissemination.
- Generate better, more complete cases for prosecutors and the courts.
- Save time and resources.

2 INTEGRITY, ACCURACY, EFFICIENCY, EXTENSIBILITY

● Modularis has created a highly efficient criminal investigation and evidence management system for investigators, supervisors and prosecutors. Designed for use by larger local, state and federal law enforcement agencies, MCIS provides:

- Centralized, automated end-to-end process that permits investigators access to complete, accurate information immediately and from any location.
- Advanced audit trail that ensures due process and evidence/data security.
- Complete control over data ownership and visibility.
- Customized user interface that is easy to use by investigators ensuring greater accuracy, integrity, and investigator acceptance.
- Robust tool to track evidence detail and upload documents, photographs, videos, and other case-related materials.
- Easy extensibility to prosecution matter management systems and links to other case-related information sources.
- Client-tailored workflow system to manage work effectiveness, supervisor reviews and timely decision making.
- Stable, proven technology requiring fewer IT personnel hours and resources.

3 MICROSOFT CENTERED

● The foundation of the Criminal Investigation System is the field-proven Modularis Accelerator Enterprise Application Platform. Built upon the Microsoft .NET Framework, MCIS incorporates the following Microsoft technologies:

- Windows 7
- SQL Server 2008
- SharePoint
- Windows Server 2008 R2
- Windows Azure Platform

● Modularis is a Microsoft Gold Certified Partner and has earned ISV Competency for its ability to design, develop, sell, and support commercial-grade software systems.

‘Microsoft is fully committed to using technology to help enable and enhance the effectiveness of public safety professionals throughout the world. Through its powerful criminal investigation and evidence management system, Microsoft Partner Modularis has provided law enforcement agencies with a compelling tool in their battle against crime.’

Pat Weikle
Senior Architect, Microsoft

MODULARIS CRIMINAL INVESTIGATION SYSTEM (MCIS)

Accelerating Public Safety

4 CLIENT CUSTOMIZED

● MCIS permits clients to build upon their current systems without having to re-create and re-invent. MCIS also allows law enforcement agencies to extend the system cost effectively by supporting an unlimited number of User-Defined Fields and allowing complete user customization of lists, forms, and reports. Client customization yields the following benefits:

- Extensibility - Easily accommodates new agency behavior, experience and requirements. Integrates with other case-related systems such as: arrest-warrant applications, seized-property asset management software, and prosecution matter management systems.
- Business Rules Definition - Tailored rules are established in user fields to ensure that case information and evidence is correct and complete and incorporates standard agency language and terms.
- Data Security - Extensive security model provides complete control over data ownership, confidentiality, interagency visibility, and user access down to the field level.

5 MODULARIS MOBILE VIDEO PLATFORM

● The Modularis Criminal Investigation System integrates seamlessly with the Modularis Mobile Video Platform (MVP) allowing in-vehicle digital video recordings and telemetry data to be imported as evidence and automatically linked to investigations in MCIS. This field-proven system automatically and wirelessly uploads secure videos and related data to a central on-premise or cloud-based repository. Supervisory personnel then search, tag, archive, and distribute video evidence via MVP Repository software.

6 MODULARIS ACCELERATOR PLATFORM

- Since 1999 every enterprise software solution we have built is robust, secure, scalable, flexible, and as future-proof as possible.
- The Modularis Criminal Investigation System is built upon Modularis Accelerator's proven and extensible end-to-end service-oriented architecture. Accelerator provides law enforcement executives:
 - Accelerated project completion.
 - Lower time-related costs.
 - Rapid ROI.
 - High initial quality with markedly reduced risk.
 - Improved maintainability with less cost.
 - Enhanced agility.

7 EFFECTIVENESS ACCELERATED

● We are measured by how we create value for our public safety clients through the Modularis Criminal Investigation System and our advisory, customization and integration services.

'Throughout the course of implementing our new investigation management system, Modularis was able to rapidly incorporate complex business requirements and deliver system enhancements in a significantly expedited time frame. Furthermore, these enhancements could be enabled without having to completely rebuild or overhaul the application from the ground up. This will benefit us greatly as new mandates and requirements are identified going forward.'

George White
Chief Information Officer
Pennsylvania Office of Attorney
General, Harrisburg, Pennsylvania

IS MCIS RIGHT FOR ME?

- I need a modern criminal investigation system that can be quickly customized to the needs of my agency.
- I need a system that will ensure the security and integrity of my evidence and case information.
- I need a solution that is accepted and easily used by my law enforcement personnel.
- I need an extensible system that accommodates large agency behavior and requirements and easily integrates with other case-related systems.
- I need the ability to customize and extend the system using my own IT resources.
- I need to get there quickly and cost-effectively.

If the answer to any of these statements is yes, contact us to schedule a demonstration.
